

## **No.59** In-service testing of large permanently installed breathing gas containers onboard diving vessels

(May  
1999)

The following is recommended:

At 1st Special Survey:

- External and internal survey, by intrascope if necessary.
- If internal survey is not possible or if corrosion or other items of concern are found, hydraulic test to 1.25 x design pressure to be carried out.

At subsequent Special Surveys:

- External and internal survey, by intrascope if necessary.
- Hydraulic test to 1.25 x design pressure.

---

Note: The Recommendation was recategorized from UR Z5.
