cont'd

3.5 Other Relevant Data

3.5.1 In the case where the inclinations are carried out by means of transfer of water, it has to be possible to evaluate accurately the weight and the centre of the shifted liquid in relation to the ship's heel and trim.

3.5.2 The weather conditions, i.e., wind speed and direction relative to the vessel, sea state, air and water temperatures, etc., during the test are to be recorded. ◀

4 Postponement of the Test

If during the course of an inclining test circumstances arise such that the aforesaid requirements are not complied with the attending Surveyor should advise the Person in Charge that the results may not be accepted. ▶

5. Test Report and Analysis of Lightship Data

5.1 The Builder/Owner should incorporate the data gathered during the test into a comprehensive test report, which may be combined with the analysis of the lightship data. Test readings not used in the final analysis should still be recorded in the report.

5.2 The Surveyor is to ensure that the data given in the report is consistent with that gathered during the test and to sign the report.

5.3 The inclining test report and analysis, combined with the report or separately, should be submitted to the Society for review and acceptance of results as the basis for approval of the stability information of the ship. ◀◀
