

MPC 75 (July 2004) **Resolution 2 of the 1997 MARPOL Conference
Technical Code on Control of Emission of
Nitrogen Oxides from Marine Diesel Engines**

Chapter 5.11 Data evaluation for gaseous emissions

Chapter 5.11 reads as follows:

For the evaluation of the gaseous emissions, the chart reading of the last 60 seconds of each mode shall be averaged, and the average concentrations (conc) of CO, CO₂, HC, NO_x, and O₂ during each mode shall be determined from the average chart readings and the corresponding calibration data.

Interpretation:

For application of this section it shall be interpreted that the averaged results must be given to 2 decimal places for the CO₂ / O₂ species and whole numbers for the CO, HC and NO_x species.

Note:

This UI is to be uniformly implemented by IACS Societies from 19 May 2005.
